

# COMPANY PROFILE

## ABOUT US

- **Company Profile**

- Our History
- Our Values

*What most people see as waste, Waste Solutions sees as a resource. Where others see problems we see opportunities and solutions. Waste Solutions have made it our business to understand the principles and technologies of wastewater treatment and biogas production and we see our role as turning our knowledge into value for our clients.*

This is achieved by ensuring our clients have access to the latest and best technologies for recovering and maximising the energy potential from a wide range of conventional and difficult wastes. As a world leader in the industry, we have researched and developed many solutions to assist and encourage natural processes and developed many innovative and low cost systems for harnessing and using what is the most environmentally friendly fuel on the planet, biogas.

Waste Solutions has always had a strong research and development focus and we have an in-house, high tech, research, development and testing laboratory staffed with Scientists and Biotechnologists. Over the decades some of our research findings, particularly with Biogas, Anaerobic Digestion (AD) and Biological Nutrient Removal (BNR) have evolved into commercial solutions. As a result we have developed skills and expertise in many areas including process design, project delivery, construction, automation and operations.

We are currently expanding in size and are very excited about the future of our business as our elegant, low cost solutions are increasingly recognised for delivering excellent results, reliability and exceptional value. If you have a large amount of organic waste and would like to find out how we can work together, [please contact us today.](#)
