- Future Developments

*Turning Waste to Energy is not only possible but can also be very profitable.*

Our unique, trademarked Cigar® (Covered In-Ground Anaerobic Reactor) represents the best value, most robust and highest yield Biogas system on the market. It is ideal for situations where space is not at a premium as the footprint is larger than tank based systems. An installation is extremely reliable and with a 100% success record and a typical return on investment of 18-24 months. Cigar® is the market leading, low-cost, high yield solution for a great variety of organic wastes.

A Cigar® CARB facility in South East Asia

Whether you want a traditional Design and Construction contract, a Turn Key contract, a BOOT Contract, or partial services we can be of help. [Contact us](#) for more information.
